

Open Loop Lifecycle & End-to-End Flow

Instructions are tracked until a person confirms follow-through

LOOP STATES · loops.py / matching.py · every transition → loop_events

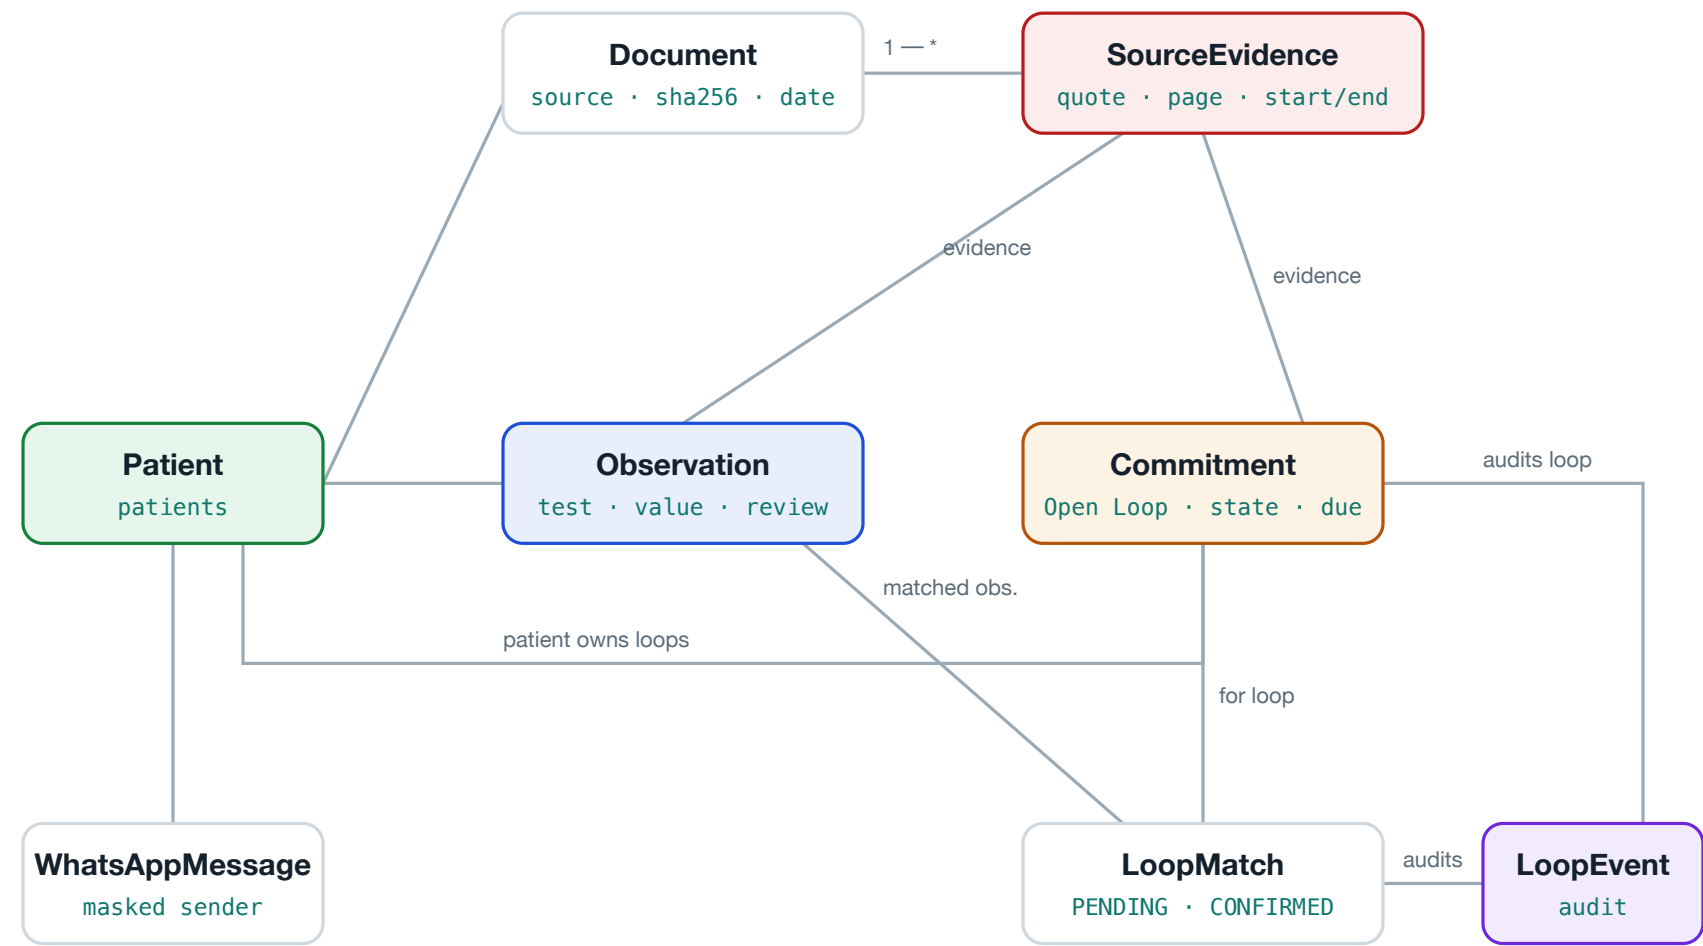

DEMO WALKTHROUGH · SYNTHETIC PATIENT

CONFLICT HANDLING

Same test on the **same report date** with different values (9.4% vs 8.2%) → **CONFLICT · HUMAN_REVIEW_REQUIRED**, full evidence for each side. Different dates form a series, not a conflict. JeevaFlow never picks a winner.

ENTITY RELATIONSHIPS · models.py

Observations and commitments each reference a Document and a SourceEvidence row. Items whose quote cannot be located in the page text are rejected before storage (reported as evidence_rejected).

SAFETY BOUNDARIES

- ✗ Never diagnoses, prescribes or changes medication; replies make no medical claims
- ✗ Extracted values are never treated as verified until a person verifies them
- ✗ Unanchored extractions are rejected, not stored
- ✗ Conflicts are never silently resolved
- ✗ Loops never auto-close: POTENTIAL_MATCH → CLOSED needs a named human
- ✗ Unreadable images → RETAKE; nothing is read from them
- ✗ Unknown WhatsApp numbers are never auto-registered
- ✗ Twilio credentials only sent to https://*.twilio.com; secrets never logged

TECHNOLOGY STACK

Backend

- Python 3
- FastAPI
- SQLAlchemy
- SQLite
- PyMuPDF
- Tesseract
- OpenCV
- Pillow
- httpx

Frontend · Messaging · Tests

- React 19
